PRODUCT RELEASE

AMERICAN FABRIC FILTER CO. has expanded its range of stocked fabrics to offer more filter media choices beyond the standard felts. Whether for the baking, milling, plastics, powder coating, or woodworking industry, AFF has the right fabric for the application. Shiny nylon and polyester satins provide outstanding cake release for problematic sticky or fibrous dust while high-breathing monofilaments and rugged coated fabrics are durable enough for harsh outdoor conditions. AFF offers free consultations to determine the filter size and fabric best suited to your application to achieve optimum filtration and confine even the finest particles. From 3" to 3 stories high, from 1 to 1000, we can make it! Each AFF filter system is designed to insure our customers' requirements are met with an effective filter design based on CFM, dust type, and usage within available space.

Fine plastics dust is captured in this 10 ft long slick nylon satin bag. A full-length taper provides increased breathable surface area without a bottom "shelf" inside the bag for falling dust to accumulate on.
